CONTENTS OF VOLUME 133

NUMBER 1, AUGUST 1983

Identification and Fractionation of Human Milk Oligosaccharides by Proton-Nuclear Magnetic Resonance Spectroscopy and Reverse-Phase High-Performance Liquid Chromatography *Virendra K. Dua and C. Allen Bush* 1

A Sectorial Centrifuge Cell for Swinging Bucket Rotors—Application to a Velocity Gradient Centrifugation Methodology *Julio C. Pita, Francisco J. Muller, and Candido F. Pezon* 9

A High-Sampling-Rate Automated Continuous-Flow Fluorometric Technique for the Analysis of Nanogram Levels of Histamine in Biological Samples *B. Lebel* 16

The Extraction of Leukotrienes (LTC_4, LTD_4, and LTE_4) from Tissue Fluids: The Metabolism of these Mediators during IgE-Dependent Hypersensitivity Reactions in Lung *Robert M. Clancy and Tony E. Hugli* 30

An Assay for the Detection of Specific Binding of 3-Methylcholanthrene to Rat Liver Cytosolic Proteins Using DEAE-Cellulose *B. Tierney, S. Munzer, and E. Bresnick* 40

Ethylated Fluoresceins: Assay of Cytochrome *P*-450 Activity and Application to Measurements in Single Cells by Flow Cytometry *Arthur G. Miller* 46

A Method for Concentration of Nucleoside Triphosphates by Coprecipitation with Calcium Fluoride *Eila I. Kukko, Tuija M. Kallio, and Jukka K. Heinonen* 58

High-Pressure Liquid Chromatographic–Reductive Electrochemical Detection Analysis of Serum *trans*-Phylloquinone *Takami Ueno and J. W. Suttie* 62

Separation of Pteridines from Blood Cells and Plasma by Reverse-Phase High-Performance Liquid Chromatography *Berta Andondonskaja-Renz and Hans-Jörg Zeitler* 68

A Rapid Method for Preparation of Bacterial Plasmids *James Summerton, Thomas Atkins, and Richard Bestwick* 79

Separation of Synthetic Oligonucleotides on Columns of Microparticulate Silica Coated with Crosslinked Polyethylene Imine *T. G. Lawson, F. E. Regnier, and H. L. Weith* 85

Purification of Glutathione Reductase from Gerbil Liver in Two Steps *Nguyen Le Trang, Kuldeep K. Bhargava, and Anthony Cerami* 94

Determination of Cystathionine in Rat Tissues Using Isotachophoresis *Hiroyuki Kodama, Noriko Mizoguchi, Keiko Sasaki, and Hiroaki Mikasa* 100

Chromophoric Peptide Substrates for Activity Determination of Animal Aspartic Proteinases in the Presence of Their Zymogens: A Novel Assay *Jan Pohl, Miroslav Baudyš, and Vladimír Kostka* 104

Staining of Alkali-Labile Phosphoproteins and Alkaline Phosphatases on Polyacrylamide Gels *Ignace Debruyne* 110

The Reduction of Hydroxamic Acids with Titanium(III) Chloride: A Tool for the Characterization of Siderophores *David J. Kushner, Todd A. Landry, Mary C. Tyrrell, and Hugh A. Akers* 116

Synthesis of a Naphthylvinylpyridine Derivative and Its Use for Affinity Chromatography of Choline Acetyltransferase *Costantino Cozzari and Boyd K. Hartman* 120

Efficient Transfer of Proteins from Acetic Acid–Urea and Isoelectric-Focusing Gels to Nitrocellulose Membrane Filters with Retention of Protein Antigenicity *Terrell K. Johnson, K. C. Leonard Yuen, Robin E. Denell, and Richard A. Consigli* 126

Determination of the Degree of Derivatization of Acryloylated Polysaccharides by Fourier Transform Proton NMR Spectroscopy
Matti Lepistö, Per Artursson, Peter Edman, Timo Laakso, and Ingvar Sjöholm 1
Rate of DNA Synthesis in Exponentially Growing Cell Lines in the Presence and Absence of Antimetabolites
Nico Naaktgeboren, Kees Roobol, Jos Theunissen, and Jan L. Bernheim 11
An Automated Method for Determination of the Molecular Weight of Macromolecules via Sedimentation Equilibrium in a Preparative Ultracentrifuge
Arun K. Attri and Allen P. Minton 14
A One-Step Procedure for the Purification of Uridine Phosphorylase from *Escherichia coli*
Alberto Vita and Giulio Magni 1
India Ink Staining of Proteins on Nitrocellulose Paper
Kathy Hancock and Victor C. W. Tsang 1
Colorimetric Determination of Catechol Siderophores in Microbial Cultures
Clément Rioux, D. Carlyle Jordan, and James B. M. Rattray 16
Preparation and Stabilization of Aqueous/Ethanolic Superoxide Solutions
Benon H. J. Bielski and Ravindra L. Arudi 17
Determination of the Release Rate of Aldehyde Pheromones from Insect Lures by Cold Trapping and Direct Bioluminescence Analysis
E. A. Meighen, R. B. Szittner, and G. G. Grant 17
Metal Complexes as Mediator–Titrants for Electrochemical Studies of Biological Systems
Jay M. Johnson, H. Brian Halsall, and William R. Heineman 18
Analysis of Porphyrin Precursors, 5-Aminolevulinic Acid Derivatives by Isotachophoresis
Rumiko Fukae, Yuzo Shioi, and Tsutomu Sasa 19
Methylation Analysis of Complex Carbohydrates in Small Amounts: Capillary Gas Chromatography–Mass Fragmentography of Methylalditol Acetates Obtained from *N*-Glycosidically Linked Glycoprotein Oligosaccharides
Rudolf Geyer, Hildegard Geyer, Siegfried Kühnhardt, Werner Mink, and Stephan Stirm 19
Purification of Commercial Preparations of $NADP^+$ from AMP Contamination
I. R. Nikulin, N. F. Belyaeva, and Z. S. Kagan 208
Detection of Antigens on Nitrocellulose Paper Immunoblots with Monoclonal Antibodies
Angel L. De Blas and Holly M. Cherwinski 214
An Automated Micropipet Especially Designed for Use with the Oil-Well Technique
Hubert Fink and Dirk Pette 220
Fixation and Immunoperoxidase Staining of Oligopeptides after Isoelectric Focusing in Thin Polyacrylamide Slab Gels
P. J. Van Der Sluis, G. J. Boer, and C. W. Pool 226
An Improved Automated Periodate–Resorcinol Method for the Determination of Sialic Acid
Theodore R. Oegema, Jr. and Katherine M. Cooper 233
Detection and Determination of Pyrroloquinoline Quinone, the Coenzyme of Quinoproteins
J. A. Duine, J. Frank, Jzn., and J. A. Jongejan 239
A Bioluminescent Assay for 12-α-Hydroxy Bile Acids Using Immobilized Enzymes
Juergen Schoelmerich, John E. Hinkley, Ian A. Macdonald, Alan F. Hofmann, and Marlene DeLuca 244
Mobile Phase Selection for the High-Performance Ion-Exchange Chromatography of Proteins
W. Kopaciewicz and F. E. Regnier 251
A Method for Concentrating Dilute Solutions of Macromolecules
H. G. Vartak, M. V. Rele, M. Rao, and V. V. Deshpande 260

RRATUM

Volume 118, Number 2, December 1981: David L. Hurley and Reginald A. Deering, "Sensitive Detection of Specific Repair Endonucleases: Radial Diffusion Assay Utilizing Differential Alkaline Denaturation of Supercoiled and Nicked PM2 DNA in Agarose Gels," pp. 371–381 264

NUMBER 2, SEPTEMBER 1983

A Simple Procedure for Large-Scale Preparation of Pure Plasmid DNA Free from Chromosomal DNA from Bacteria *M. Mukhopadhyay and N. C. Mandal* 265

Rapid Resolution of Transferrin^c Subtypes through Isoelectric Focusing with 2-Mercaptoethanol *Pietro Auconi, Romolo Donnini, Giovannella Bruscalupi, and Vincenzo Pascali* 271

Laccase Assay by Means of High-Performance Liquid Chromatography *Maurizio Badiani, Marcello Felici, Marcello Luna, and Franca Artemi* 275

Radiochemical Synthesis of L-[*Guanidinooxy*-^{14}C]canavanine *Gerald A. Rosenthal, Kelsey R. Downum, and James E. Mattler* 277

Quantitation of Serum Retinol-Binding Protein by an Enzyme-Linked Immunosorbent Assay *Ejal Bosin and Nobuo Monji* 283

Molecular Weight Determination of Peptides by High-Performance Gel Permeation Chromatography *W. O. Richter, B. Jacob, and P. Schwandt* 288

A Continuous Spectrophotometric Assay for *Escherichia coli* Alanyl-Transfer RNA Synthetase *Siddhartha Roy* 292

Analysis of Cyclic Nucleotide Phosphodiesterase by Isoelectric Focusing Coupled to a Specific Activity Stain *Georges Némoz, Annie-France Prigent, and Henri Pachéco* 296

An Ultrasensitive Electrometric System to Measure Membrane-Bound Acetylcholinesterase Activity *E. Muñoz Delgado, J. C. Gomez-Fernandez, O. Lopez Mayorga, J. A. Lozano, and C. J. Vidal* 302

Determination of Cholecystokinin Tetrapeptide and Cholecystokinin Octapeptide Sulfate in Different Rat Brain Regions by High-Pressure Liquid Chromatography with Electrochemical Detection *André Sauter and Willi Frick* 307

Infrared Spectroscopy of Retinoids *Natalie L. Rockley, Bruce A. Halley, Mark G. Rockley, and Eldon C. Nelson* 314

Two-Dimensional Zymogram Analysis of Nucleases in *Bacillus subtilis* *Susan A. Coughlin and D. MacDonald Green* 322

High-Performance Liquid Chromatographic Analysis of Amino Acids in Physiological Fluids: On-Line Precolumn Derivatization with *o*-Phthaldialdehyde *Marianne O. Fleury and David V. Ashley* 330

Inter-α-trypsin Inhibitor (ITI): Use of New Antisera for Qualitative Studies and Discrete Quantitation of ITI and Its Derivatives *Jean-P. Salier, Richard Sesboüé, Dominique Vercaigne, Jeannette Bourguignon, and Jean-P. Martin* 336

Enzymatic Analysis of 2,5-Anhydro-D-mannitol and Related Compounds *William L. Dills, Jr., Judy I. Geller, Katherine M. Gianola, and Geraldine M. McDonough* 344

Rat Liver Alcohol Dehydrogenase. I. Purification and Characterization *Pushkaraj J. Lad and Hyam L. Leffert* 350

Rat Liver Alcohol Dehydrogenase. II. Quantitative Enzyme-Linked Immunoadsorbent Assay *Pushkaraj J. Lad and Hyam L. Leffert* 362

The Analysis of Acyl-coenzyme A Derivatives by Reverse-Phase High-Performance Liquid Chromatography *Michael S. DeBuysere and Merle S. Olson* 37
Recovery of Methylated Saccharides from Methylation Reaction Mixtures Using Sep-Pak C_{18} Cartridges *Andrew J. Mort, Susan Parker, and Mao-Sung Kuo* 38
Reduction Potential and Thermodynamic Parameters of Adrenodoxin by the Use of an Anaerobic Thin-Layer Electrode *Yung-Yuan Huang and Tokuji Kimura* 38
Radiometric Assay of *S*-Adenosylmethionine:calmodulin(lysine)*N*-methyltransferase by Calcium-Dependent Hydrophobic Interaction Chromatography *Paul M. Rowe, Timothy J. Murtaugh, Wendy L. Bazari, Margaret Clarke, and Frank L. Siegel* 39
The Purification and Identification of Flavin Nucleotides by High-Performance Liquid Chromatography *Barrie Entsch and Robin G. Sim* 40
Affinity Precipitation of Dehydrogenases *Susanne Flygare, Tadhg Griffin, Per-Olof Larsson, and Klaus Mosbach* 40
A Rapid and Sensitive Method for the Assay of UDP-Glucuronosyltransferase Activity toward Bile Acids *Heidrun Matern, Siegfried Matern, and Wolfgang Gerok* 41
A Coupled Radiometric Assay for Dihydrofolate Reductase Based on the Oxidative Decarboxylation of D-6-Phospho-[1-^{14}C]gluconate *Pradipsinh K. Rathod and Philip Reyes* 42
Quantitative Analysis of Ether-Linked Lipids as Alkyl- and Alk-1-enyl-glycerol Benzoates by High-Performance Liquid Chromatography *Merle L. Blank, Edgar A. Cress, Ten-ching Lee, Nelson Stephens, Claude Piantadosi, and Fred Snyder* 43
Quantitation of Intracellular Membrane-Bound Enzymes and Receptors in Digitonin-Permeabilized Cells *Paul H. Weigel, Darryl A. Ray, and Janet A. Oka* 43
A Microfluorometric Assay for Cholinesterases, Suitable for Multiple Kinetic Determinations of Picomoles of Released Thiocholine *Ruti Parvari, Israel Pecht, and Hermona Soreq* 450
Purification of Human Milk Bile Salt-Activated Lipase *Chi-Sun Wang and Kerri Johnson* 457
Quantitative Isolation of DNA Restriction Fragments from Low-Melting Agarose by Elutip-d Affinity Chromatography *John J. Schmitt and Bennett N. Cohen* 462
A Spectrophotometric Method to Determine the Amount of CO Bound to Hemocyanin *Lello Zolla and Maurizio Brunori* 465
Alkaline Butanol Extraction of Bile Salt and Steroid Sulfate Esters: Application to the Assay of Sulfotransferases *Stephen Barnes, Rodney Waldrop, and Ann S. Neighbors* 470
Quantification of Polyacrylamide Gel Bands by Digital Image Processing *Keith K. Stanley and Tony J. Pitt* 476
Purification of Amyloglucosidase *Pramod B. Mahajan, Suhas R. Kolhekar, and Prabhakar S. Borkar* 482
A Method to Measure Critical Detergent Parameters. Preparation of Liposomes *J. Lasch, V. R. Berdichevsky, V. P. Torchilin, Regine Koelsch, and K. Kretschmer* 486
Free Metal Ion Depletion by "Good's" Buffers. III. *N*-(2-Acetamido)iminodiacetic Acid, 2:1 Complexes with Zinc(II), Cobalt(II), Nickel(II), and Copper(II); Amide Deprotonation by Zn(II), Co(II), and Cu(II) *Edward A. Lance, Charles W. Rhodes III, and Robert Nakon* 492

Sequence of Plasmin Proteolysis at the NH_2-Terminus of the Bβ-Chain of Human Fibrinogen
James A. Koehn, Anne Hurlet-Jensen, Hymie L. Nossel, and Robert E. Canfield 502
Spectrophotometric Quantitation of Silver Grains Eluted from Autoradiograms
Mordechai Suissa 511
A Discontinuous Electrophoretic System for Separating Peptides on Polyacrylamide Gels *Jack Kyte and Henry Rodriguez* 515

AUTHOR INDEX FOR VOLUME 133 527

The Subject Index for Volume 133 will appear in the December 1983 issue as part of a cumulative index for the year 1983.

INFORMATION FOR AUTHORS[1]

Analytical Biochemistry is an international journal that will publish original articles on methods of interest to the biochemical sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

— Cell and tissue culture techniques that are of general application.

— Sequencing and synthesis of nucleic acids; chemical mutagenesis.

— Purification methods for enzymes and other proteins when a high level of purity has been achieved.

— Immunochemical techniques, both analytical and preparative, if they are of general applicability by biochemists. Included are radioimmunoassays, but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

— Pharmacological and toxicological research techniques that have a biochemical approach.

— Review articles dealing with timely topics. Although these are generally invited, unsolicited manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to ***Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101.** In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal now requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about 8½ × 11 inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), an abstract (50–150 words), and the address to which proof should be mailed. In creating a title for your paper, please omit words such as *novel, rapid, improved, simple, sensitive, efficient, convenient, new.* Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? **Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers.** These words will also be used in the preparation of the annual cumulative subject index for the journal. Please number all pages of the manuscript.

Text. The suggested organization of an article is: abstract; introductory statement; materials and general methods; results; discussion; acknowledgment; references. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Information for Authors, appearing in the July 15, 1981 issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

---

[1] An extended Information for Authors was published in the July 1, 1983 issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC–IUB rules and recommendations, and accepted abbreviations.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is 8½ × 11 inches (21 × 27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index,* 1980. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jones, J. B., Dilworth, G. L., and Stadtman, T. C. (1979) *Arch. Biochem. Biophys.* **125,** 255–260.
2. Metzler, D. E. (1977) Biochemistry: The Chemical Reaction of Living Cells, p. 298, Academic Press, New York.
3. Harrington, W. F. (1979) *in* The Proteins (Neurath, H., and Hill, R. L., eds), Vol. 4, pp. 246–409, Academic Press, New York.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
